***OLED-MODULE***

**DEP 256064A1-W**  
**2,8“ - OLED**

Product Specification

Ver.: 10

04.10.2022

## Revision History

VERSION	DATE	REVISED PAGE NO.	Note
0	14.03.2016		First Release
1	01.06.2016		Modify Static Electricity Test
2	02.09.2019		Modify Precautions in use of OLED Modules
3	18.12.2019		Modify Reliability Test and Measurement Conditions & Inspection Specification:" Accept no Dense" Modify to "Ignore"& Precautions
4	02.01.2020		Modify Reliability test Condition ; Add Application recommendations & Initial code
5	20.03.2020		Modify Drawing
6	16.07.2020		Modify Contrast Ratio
7	26.08.2020		Modify Inspection specification
8	18.11.2020		Modify Storage Precautions
9	25.02.2021		Modify Precautions in use of OLED Modules
10	04.10.2022		Modify Reliability Test and measurement conditions

# **Contents**

1. General Specification
2. Interface Pin Function
3. Contour Drawing & Block Diagram
4. Absolute Maximum Ratings
5. Electrical Characteristics
6. Optical Characteristics
7. OLED Lifetime
8. Reliability
9. Inspection specification
10. Precautions in use of OLED Modules

# **1. General Specification**

The Features is described as follow:

- Module Dimension: 84.00 × 25.80 × 2.15 mm
- Active Area: 69.098 × 17.258 mm
- Dot Matrix: 256 x 64
- Pixel Size: 0.248 × 0.248 mm
- Pixel Pitch: 0.27 × 0.27 mm
- Duty: 1/64 Duty
- Display Mode: Passive Matrix
- Display Color: White
- IC: SSD1322 COF
- Interface: 6800, 8080, SPI
- Size: 2.8 Inch

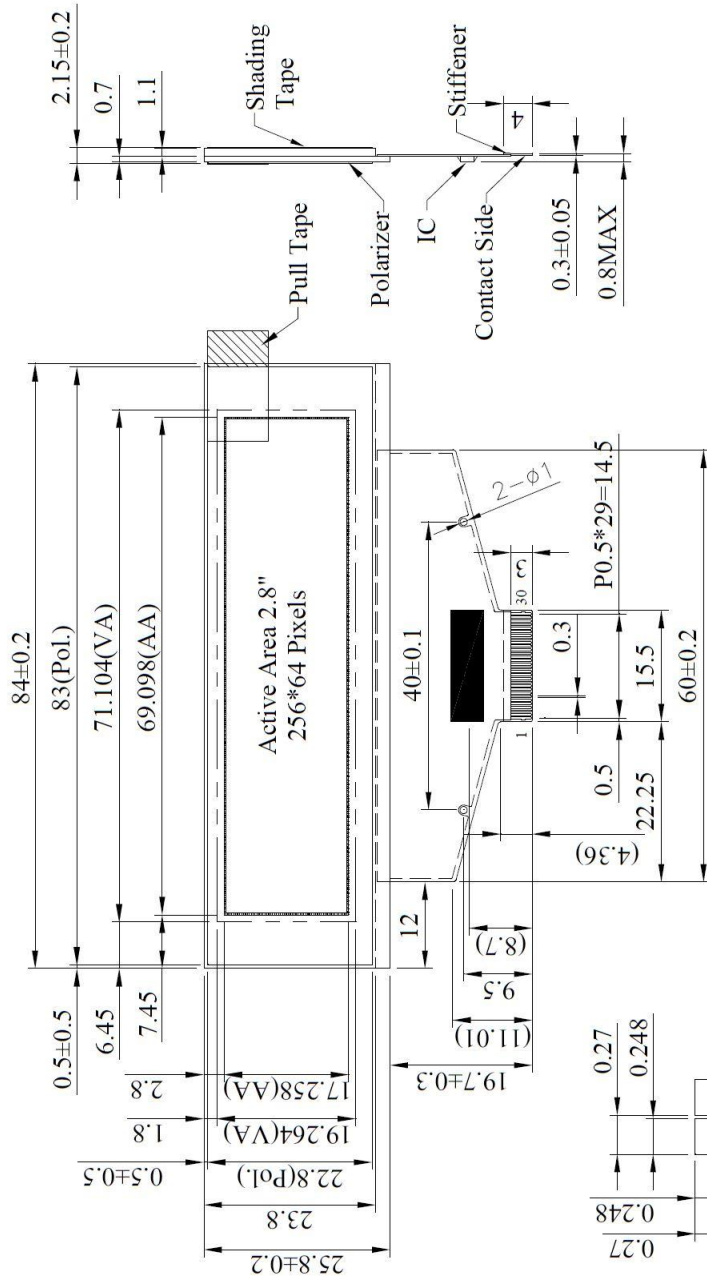

## 2.Interface Pin Function

Pin Number	Symbol	I/O	Function															
<b>Power Supply</b>																		
26	VCI	P	<b>Power Supply for Operation</b> This is a voltage supply pin. It must be connected to external source & always be equal to or higher than VDD & VDDIO.															
25	VDD	P	<b>Power Supply for Core Logic Circuit</b> This is a voltage supply pin. It can be supplied externally (within the range of 2.4~2.6V) or regulated internally from VCI. A capacitor should be connected between this pin & VSS under all circumstances.															
24	VDDIO	P	<b>Power Supply for I/O Pin</b> This pin is a power supply pin of I/O buffer. It should be connected to VDD or external source. All I/O signal should have VIH reference to VDDIO. When I/O signal pins (BS0~BS1, D0~D7, control signals...) pull high, they should be connected to VDDIO.															
2	VSS	P	<b>Ground of Logic Circuit</b> This is a ground pin. It also acts as a reference for the logic pins. It must be connected to external ground.															
3,29	VCC	P	<b>Power Supply for OLED Panel</b> These are the most positive voltage supply pin of the chip. They must be connected to external source.															
5,28	VLSS	P	<b>Ground of Analog Circuit</b> These are the analog ground pins. They should be connected to VSS externally.															
<b>Driver</b>																		
22	IREF	I	<b>Current Reference for Brightness Adjustment</b> This pin is segment current reference pin. A resistor should be connected between this pin and VSS. Set the current lower than 10uA.															
4	VCOMH	P	<b>Voltage Output High Level for COM Signal</b> This pin is the input pin for the voltage output high level for COM signals. A tantalum capacitor should be connected between this pin and VSS.															
27	VSL	P	<b>Voltage Output Low Level for SEG Signal</b> This is segment voltage reference pin. When external VSL is not used, this pin should be left open. When external VSL is used, this pin should connect with resistor and diode to ground.															
<b>Testing Pads</b>																		
21	FR	O	<b>Frame Frequency Triggering Signal</b> This pin will send out a signal that could be used to identify the driver status. Nothing should be connected to this pin. It should be left open individually.															
16	BS0	I	<b>Communicating Protocol Select</b> These pins are MCU interface selection input. See the following table:															
17	BS1																	
			<table border="1"> <thead> <tr> <th></th> <th>BS0</th> <th>BS1</th> </tr> </thead> <tbody> <tr> <td>3-wire SPI</td> <td>1</td> <td>0</td> </tr> <tr> <td>4-wire SPI</td> <td>0</td> <td>0</td> </tr> <tr> <td>8-bit 68XX Parallel</td> <td>1</td> <td>1</td> </tr> <tr> <td>8-bit 80XX Parallel</td> <td>0</td> <td>1</td> </tr> </tbody> </table>		BS0	BS1	3-wire SPI	1	0	4-wire SPI	0	0	8-bit 68XX Parallel	1	1	8-bit 80XX Parallel	0	1
	BS0	BS1																
3-wire SPI	1	0																
4-wire SPI	0	0																
8-bit 68XX Parallel	1	1																
8-bit 80XX Parallel	0	1																
20	RES#	I	<b>Power Reset for Controller and Driver</b> This pin is reset signal input. When the pin is low, initialization of the chip is executed.															
19	CS#	I	<b>Chip Select</b> This pin is the chip select input. The chip is enabled for MCU communication only when CS# is pulled low.															
18	D/C#	I	<b>Data/Command Control</b>															

			<p>This pin is Data/Command control pin. When the pin is pulled high, the input at D7~D0 is treated as display data.</p> <p>When the pin is pulled low, the input at D7~D0 will be transferred to the command register. For detail relationship to MCU interface signals, please refer to the Timing Characteristics Diagrams.</p>
14	E/RD#	I	<p><b>Read/Write Enable or Read</b></p> <p>This pin is MCU interface input. When interfacing to a 68XX-series microprocessor, this pin will be used as the Enable (E) signal. Read/write operation is initiated when this pin is pulled high and the CS# is pulled low.</p> <p>When connecting to an 80XX-microprocessor, this pin receives the Read (RD#) signal. Data read operation is initiated when this pin is pulled low and CS# is pulled low.</p> <p>When serial mode is selected, this pin must be connected to VSS.</p>
15	R/W#	I	<p><b>Read/Write Select or Write</b></p> <p>This pin is MCU interface input. When interfacing to a 68XX-series microprocessor, this pin will be used as Read/Write (R/W#) selection input. Pull this pin to "High" for read mode and pull it to "Low" for write mode.</p> <p>When 80XX interface mode is selected, this pin will be the Write (WR#) input. Data write operation is initiated when this pin is pulled low and the CS# is pulled low.</p> <p>When serial mode is selected, this pin must be connected to VSS.</p>
6~13	D7~D0	I/O	<p><b>Host Data Input/Output Bus</b></p> <p>These pins are 8-bit bi-directional data bus to be connected to the microprocessor's data bus. When serial mode is selected, D1 will be the serial data input SDIN and D0 will be the serial clock input SCLK.</p> <p>Unused pins must be connected to VSS except for D2 in serial mode</p>
<b>Reserve</b>			
23	N.C.	-	<p><b>Reserved Pin</b></p> <p>The N.C. pin between function pins are reserved for compatible and flexible design.</p>
1,30	N.C. (GND)	-	<p><b>Reserved Pin (Supporting Pin)</b></p> <p>The supporting pins can reduce the influences from stresses on the function pins. These pins must be connected to external ground.</p>

### 3.Counter Drawing & Block Diagram

PIN	SYMBOL	PIN	SYMBOL
1	NC(GND)	16	BS0
2	VSS	17	BS1
3	VCC	18	DC#
4	VCOMH	19	CS#
5	VLSS	20	RES#
6	D7	21	FR
7	D6	22	IREF
8	D5	23	NC
9	D4	24	VDDIO
10	D3	25	VDD
11	D2	26	VCI
12	D1	27	VSL
13	D0	28	VLSS
14	E/RD#	29	VCC
15	R/W#	30	NC(GND)

The non-specified tolerance of dimension is ±0.3mm.

DOT SIZE  
SCALE 20/1

### 3.1 Application recommendations

Recommended components :

C3, C4, C5 : 1.0uF

C1, C2 : 4.7uF

D1, D2 : 1N4148, 0.7V

R2 : 50ohm

Bus Interface selection: (Must be set the BS[1:0], refer to item 3)

8-bits 6800 and 8080 parallel, 3 or 4-wire SPI

Voltage at IREF = VCC – 6V. For VCC = 14.5V, IREF = 10uA:

$$R1 = (\text{Voltage at IREF} - \text{VSS}) / \text{IREF}$$

$$= (14.5 - 6) / 10\mu\text{A} \approx 850\text{K ohm}$$

## 4. Absolute Maximum Ratings

Parameter	Symbol	Min	Max	Unit	Notes
Supply Voltage for Logic	VDD	-0.5	2.75	V	1, 2
Low Voltage Power Supply	VCI	-0.3	4.0	V	1, 2
Power Supply for I/O Pins	VDDIO	-0.5	VCI	V	1, 2
Supply Voltage for Display	VCC	-0.5	20.0	V	1, 2
Operating Temperature	TOP	-40	+80	°C	-
Storage Temperature	TSTG	-40	+85	°C	-

Note 1: All the above voltages are on the basis of "VSS = 0V".

Note 2: When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section 6 "Electrical Characteristics". If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate

## 5. Electrical Characteristics

### 5.1 DC Electrical Characteristics

Item	Symbol	Condition	Min	Typ	Max	Unit
Supply Voltage for Logic	VCI	Note	2.8	3.0	3.3	V
Supply Voltage for Display	VCC	-	14	14.5	15	V
High Level Input	VIH	-	0.8×VDDIO	-	VDDIO	V
Low Level Input	VIL	-	0	-	0.2×VDDIO	V
High Level Output	VOH	-	0.9×VDDIO	-	VDDIO	V
Low Level Output	VOL	-	0	-	0.1×VDDIO	V
50% Check Board operating Current		VCC =14.5V	-	30	32	mA

Note: Supply Voltage for Logic = VDD core power supply can be regulated from VCI.

**5.2 Initial code**

```
void Initial_ic(void)
{
    write_command(0xFD); //set Command Lock
    write_data(0x12);

    write_command(0xAE); //Sleep mode ON (Display OFF)

    write_command(0xB4); //Display Enhancement A
    write_data(0xA0);
    write_data(0xB5);

    write_command(0xA0); //set Re-map and Dual COM Line mode
    write_data(0x10);
    write_data(0x11);

    write_command(0xCA); //set MUX Ratio
    write_data(0x3F);

    write_command(0xD1); //Display Enhancement B
    write_data(0x82);
    write_data(0x20);

    write_command(0xC1); //set Contrast current
    write_data(0x7D);

    write_command(0xC7); //master Contrast current Control
    write_data(0x0F);

    write_command(0xB3); //set Front Clock Divider/Oscillator Frequency
    write_data(0x91);

    write_command(0xB1); //set Phase Length
    write_data(0xF8);

write_data(0x3F);

write_command(0x5C); //Write RAM Command

White_pattern(0x00,0x00); // Clear Screen
delay_1ms(200);

write_command(0xAF); //Sleep mode OFF (Display ON)
}
```

## 6. Optical Characteristics

Item	Symbol	Condition	Min	Typ	Max	Unit
View Angle	(V) $\theta$	-	160	-	-	deg
	(H) $\phi$	-	160	-	-	deg
Contrast Ratio	CR	Dark	2000:1	-	-	-
Response Time	T rise	-	-	10	-	$\mu$ s
	T fall	-	-	10	-	$\mu$ s
Display with 50% Check Board Brightness			60	80	-	cd/m <sup>2</sup>
CIEx(White)		(CIE1931)	0.26	0.28	0.30	-
CIEy(White)		(CIE1931)	0.30	0.32	0.34	-

## **7. OLED Lifetime**

<b>ITEM</b>	<b>Conditions</b>	<b>Min</b>	<b>Typ</b>	<b>Remark</b>
Operating Life Time	Ta=25°C / Initial 50% check board brightness Typical Value	20,000 Hrs	-	Note

**Notes:**

1. Life time is defined the amount of time when the luminance has decayed to <50% of the initial value.
2. This analysis method uses life data obtained under accelerated conditions to extrapolate an estimated probability density function (*pdf*) for the product under normal use conditions.
3. Screen saving mode will extend OLED lifetime.

# 8. Reliability

## Content of Reliability Test

Environmental Test			
Test Item	Content of Test	Test Condition	Applicable Standard
High Temperature Storage	Endurance test applying the high storage temperature for a long time.	85°C 240hrs	—
Low Temperature Storage	Endurance test applying the low storage temperature for a long time.	-40°C 240hrs	—
High Temperature Operation	Endurance test applying the electric stress (Voltage & Current) and the thermal stress to the element for a long time.	80°C 240hrs	—
Low Temperature Operation	Endurance test applying the electric stress under low temperature for a long time.	-40°C 240hrs	—
High Temperature/ Humidity Storage	Endurance test applying the high temperature and high humidity storage for a long time.	60°C,90%RH 240hrs	—
High Temperature/ Humidity Operation	Endurance test applying the high temperature and high humidity Operation for a long time.	60°C,90%RH 120hrs	—
Temperature Cycle	Endurance test applying the low and high temperature cycle. <div style="text-align: center;"> <p style="margin: 0;">-40°C    25°C    80°C</p> <p style="margin: 0;">30min    5min    30min</p> <p style="margin: 0;">1 cycle</p> </div>	-40°C /80°C 30 cycles	—
Mechanical Test			
Vibration Test	Endurance test applying the vibration during transportation and using.	Frequency:10~55Hz amplitude:1.5mm Time:0.5hrs/axis Test axis:X,Y,Z	—
Others			
Static Electricity Test	Endurance test applying the electric stress to the finished product housing.	Air Discharge model ±4kV,10 times	—

\*\*\* Supply voltage for OLED system =Operating voltage at 25°C

**Test and measurement conditions**

1. All measurements shall not be started until the specimens attain to temperature stability. After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at  $23\pm 5^{\circ}\text{C}$ ;  $55\pm 15\%$  RH.
2. All-pixels on/off exchange is used as operation test pattern.
3. The degradation of Polarizer are ignored for High Temperature storage, High Temperature/ Humidity Storage, Temperature Cycle
4. No Condensation

**Evaluation criteria**

1. The function test is OK.
2. No observable defects.
3. Luminance:  $> 50\%$  of initial value.
4. Current consumption: within  $\pm 50\%$  of initial value.

**APPENDIX:**

**RESIDUE IMAGE**

Because the pixels are lighted in different time, the luminance of active pixels may reduce or differ from inactive pixels. Therefore, the residue image will occur. To avoid the residue image, every pixel needs to be lighted up uniformly.

## 9. Inspection specification

### Inspection Standard:

MIL-STD-105E table normal inspection single sample level II.

### Definition

- 1 Major defect : The defect that greatly affect the usability of product.
- 2 Minor defect : The other defects, such as cosmetic defects, etc.

Definition of inspection zone:

Zone A: Active Area

Zone B: Viewing Area except Zone A

Zone C: Outside Viewing Area

Note: As a general rule, visual defects in Zone C are permissible, when it is no trouble of quality and assembly to customer`s product.

### Inspection Methods

- 1 The general inspection : Under fluorescent light illumination: 750~1500 Lux, about 30cm viewing distance, within 45° viewing angle, under 25±5°C.
- 2 The luminance and color coordinate inspection : By SR-3 or BM-7 or the equal equipments, in the dark room, under 25±5°C.

NO	Item	Criterion	AQL
01	Electrical Testing	1.1 Missing vertical, horizontal segment, segment contrast defect. 1.2 Missing character , dot or icon. 1.3 Display malfunction. 1.4 No function or no display. 1.5 Current consumption exceeds product specifications. 1.6 OLED viewing angle defect. 1.7 Mixed product types. 1.8 Contrast defect.	0.65
02	Black or White Spots on OLED (Display only)	2.1 White and black spots on display $\leq 0.25\text{mm}$ , no more than three white or black spots present. 2.2 Densely spaced: No more than two spots or lines within 3mm.	2.5

NO	Item	Criterion	AQL																			
	OLED Black Spots, White Spots, Contamin ation (non- Display)	3.1 Round type : As following drawing $\Phi = (x + y) / 2$  <table border="1" data-bbox="708 321 1373 625"> <thead> <tr> <th>SIZE</th> <th>Acceptable QTY</th> <th>Zone</th> </tr> </thead> <tbody> <tr> <td><math>\Phi \leq 0.10</math></td> <td>ignore</td> <td>A+ B,</td> </tr> <tr> <td><math>0.10 &lt; \Phi \leq 0.20</math></td> <td>2</td> <td>A+ B</td> </tr> <tr> <td><math>0.20 &lt; \Phi \leq 0.25</math></td> <td>1</td> <td>A+ B</td> </tr> <tr> <td><math>0.25 &lt; \Phi</math></td> <td>0</td> <td>A+ B</td> </tr> </tbody> </table>	SIZE	Acceptable QTY	Zone	$\Phi \leq 0.10$	ignore	A+ B,	$0.10 < \Phi \leq 0.20$	2	A+ B	$0.20 < \Phi \leq 0.25$	1	A+ B	$0.25 < \Phi$	0	A+ B	2.5

## **10. Precautions in use of OLED Modules**

### **Modules**

- (1) Avoid applying excessive shocks to module or making any alterations or modifications to it.
- (2) Don't make extra holes on the printed circuit board, change the components or modify its shape of OLED display module.
- (3) Don't disassemble the OLED display module.
- (4) Do not apply input signals while the logic power is off.
- (5) Don't operate it above the absolute maximum rating.
- (6) Don't drop, bend or twist OLED display module.
- (7) Soldering: only to the I/O terminals.
- (8) Hot-Bar FPC soldering condition: 280~350C, less than 5 seconds.
- (9) Display Elektronik GmbH has the right to change the passive components (Resistors, capacitors and other passive components will have different appearance and color caused by the different supplier.) and change the PCB Rev. (In order to satisfy the supplying stability, management optimization and the best product performance...etc, under the premise of not affecting the electrical characteristics and external dimensions, Display Elektronik GmbH have the right to modify the version.)
- (10) Display Elektronik GmbH has the right to upgrade or modify the product function.
- (11) For COG & COF structure OLED products, customers should reserve VCC (VPP) adjustment function or software update function when designing OLED supporting circuit. (The progress of OLED light-emitting materials will increase the conversion efficiency and the brightness. The brightness can be adjusted if necessary).

#### **10.1. Handling Precautions**

- (1) Since the display panel is being made of glass, do not apply mechanical impacts such as dropping from a high position.
- (2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
- (3) If pressure is applied to the display surface or its neighborhood of the OLED display module, the cell structure may be damaged. So, be careful not to apply pressure to these sections.
- (4) The polarizer covering the surface of the OLED display module is soft and easily scratched.
- (5) When the surface of the polarizer of the OLED display module has soil, clean the surface. It takes advantage by using following adhesion tape.
  - \* Scotch Mending Tape No. 810 or an equivalentNever try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent such as ethyl alcohol, since the surface of the polarizer will become cloudy. Also, pay attention that the following liquid and solvent may spoil the polarizer:
  - \* Water
  - \* Ketone
  - \* Aromatic Solvents
- (6) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OLED display module has been stored for a long period of time, residue adhesive material of the protection film may remain on the surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5.
- (7) Do not touch the following sections whenever possible while handling the OLED display

modules.

\* Pins and electrodes

\* Pattern layouts such as the TCP & FPC

- (8) Hold OLED display module very carefully when placing OLED display module into the System housing. Do not apply excessive stress or pressure to OLED display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.

- (9) Do not apply stress to the LSI chips and the surrounding molded sections.
- (10) Pay sufficient attention to the working environments when handing OLED display modules to prevent occurrence of element breakage accidents by static electricity.
- \* Be sure to make human body grounding when handling OLED display modules.
  - \* Be sure to ground tools to use or assembly such as soldering irons.
  - \* To suppress generation of static electricity, avoid carrying out assembly work under dry environments.
  - \* Protective film is being applied to the surface of the display panel of the OLED display module. Be careful since static electricity may be generated when exfoliating the protective film.

## 10.2. Storage Precautions

- (1) When storing OLED display modules, put them in static electricity preventive bags to avoid be directly exposed to sun or lights of fluorescent lamps. And, also, place in the temperature  $25\pm 5^{\circ}\text{C}$  and Humidity below 65% RH (We recommend you to store these modules in the packaged state when they were shipped from Display Elektronik GmbH. At that time, be careful not to let water drops adhere to the packages or bags.)
- (2) When the OLED display module is being dewed or when it is placed under high temperature or high humidity environments, the electrodes may be corroded if electric current is applied. Please store it in clean environment.

## 10.3. Designing Precautions

- (1) The absolute maximum ratings are the ratings which cannot be exceeded for OLED display module, and if these values are exceeded, OLED display module may be damaged.
- (2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the VIL and VIH specification and to make the signal line cable as short as possible.
- (3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (VDD / VCC). (Recommend value: 0.5A)
- (4) Pay sufficient attention to avoid occurrence of mutual noise interference with the nearby devices.
- (5) As for EMI, take necessary measures on the equipment side basically.
- (6) If the power supplied to the OLED display module is forcibly shut down by such errors as taking out the main battery while the OLED display panel is in operation, we cannot

guarantee the quality of this OLED display module.

\* Connection (contact) to any other potential than the above may lead to rupture of the IC.

- (7) If this OLED driver is exposed to light, malfunctioning may occur and semiconductor elements may change their characteristics.
- (8) The internal status may be changed, if excessive external noise enters into the module. Therefore, it is necessary to take appropriate measures to suppress noise generation or to protect module from influences of noise on the system design.
- (9) We recommend you to make periodical refreshment of the operation statuses (re-setting of the commands and re-transference of the display data) to cope with catastrophic noise.
- (10) It's pretty common to use "Screen Saver" to extend the lifetime and Don't use the same image for long time in real application. When an OLED display module is operated for a long of time with fixed pattern, an afterimage or slight contrast deviation may occur.
- (11) The limitation of FPC and Film bending.

- (12) The module should be fixed balanced into the housing, or the module may be twisted.

- (13) Please heat up a little the tape sticking on the components when removing it; otherwise the components might be damaged.

**10.4. Precautions when disposing of the OLED display modules**

- (1) Request the qualified companies to handle industrial wastes when disposing of the OLED display modules. Or, when burning them, be sure to observe the environmental and hygienic laws and regulations.
